## Q6

### General Comments

Very interesting documents - main points for me:

- 1) Who does the initial assessment? Is this quantifiable?
- 2) who checks the initial assessment/category and action to be taken
- 3) who enforces the action to be undertaken?

My experience of the different government dpts (because of central government cutbacks and funding squeezes) is that they are understaffed and will need much more expertise to carry out this effectively.

There is no point having an assessment unless it is done properly and the results are used!!
